Cloud Architecture

It is one of the demanding technology of the current time & which is giving a new shape to every organization by providing on demand virtualization services / resources.

It is divided into 2 parts :-

1) **Front End**
   → Refers to client side of cloud computing system.
   eg. web browser to access the
   # cloud plat form.

2.) **Backend**

   → Refers to the cloud itself which is used by the service providers.
   eg. virtual machines, etc.

→ Provides Software Application, Storage, Infrastructure, Internet, Security, etc.
